SURFACE is our experience

Surface treatment by 3D laser is a world to explore to add value to your products.

Techno SURFACE explores the opportunities offered by laser technology. The laser technology of design and engraving of glass and plastic molds, for example, is an important reality. Even the 3D laser engraving of various kinds of metal objects allows for new horizons, as the chisel, or engraving to impart unidirectional grip, or just to obtain a dull surface, and many other applications.

Expert in surface finishing

Laser technology

Never like now, in the digital age, it is possible to simplify heavy and expensive operations, as the texturing of surfaces or engraving and marking.

Thanks to an efficient network of subcontract services of 3D laser engraving, you can avail services of Just In Time innovative and incomparable quality, competitiveness and speed of execution.

Techno SURFACE, can positively contribute to the development of your projects by identifying the ideal partners for the type of technology required.
